

# RA

## MATERIALS

Head and cover:  
Aluminium alloy

Bowl :  
Polyamide for FRA21-31-32-33-41  
Zinc plated steel for FRA11-42-51-52-53-5D

Bypass valve:  
Polyamide

Seals:  
NBR Nitrile  
FKM Fluoroelastomer on request

Indicator housing:  
Brass

## PRESSURE (ISO 10771-1:2002)

Max working:  
300 kPa (3 bar)

Test:  
500 kPa (5 bar)

Bursting:  
1 MPa (10 bar)

Collapse, differential  
for the filter element (ISO 2941):  
300 kPa (3 bar)

## BYPASS VALVE

Setting:  
170 kPa (1,7 bar)  $\pm$  10%

## WORKING TEMPERATURE

From -25° to +110° C

## COMPATIBILITY (ISO 2943:1999)

Full with fluids: HH-HL-HM-HV-HTG  
(according to ISO 6743/4)  
For fluids different than the above mentioned, please contact our Sales Department.

## APPLICATION EXAMPLE

**FILTER HOUSING**

	D1	min D2	max D2	D3	D4	D5	E	H1	H2	H3	H4	H6	P	R	kg

**FLUID SPEED**

when selecting the filter size, we suggest to consider also the max recommended fluid speed (in return lines normally  $1,5 < v < 4$  m/s)

**PRESSURE DROP CURVES ( $\Delta p$ )**

The "Assembly Pressure Drop ( $\Delta p$ )" is obtained by adding the pressure drop values of the Filter Housing and of the Clean Filter Element corresponding to the considered Flow Rate and it must be lower than 50 kPa (0,5 bar).

**FILTER HOUSING PRESSURE DROP**  
(mainly depending on the port size)

N.B. All the curves have been obtained with mineral oil having a kinematic viscosity 30 cSt and specific gravity 0,9 kg/dm<sup>3</sup>; for fluids with different features, please consider the factors described in the first part of this catalogue. All the curves are obtained from test done at the UFI HYDRAULIC DIVISION Laboratory, according to the specification ISO 3968:2005. In case of discrepancy, please check the contamination level, viscosity and features of the fluid in use.

**CLEAN FILTER ELEMENT PRESSURE DROP WITH F+, C+ AND ME MEDIA**  
(depending both on the internal diameter of the element and on the filter media)

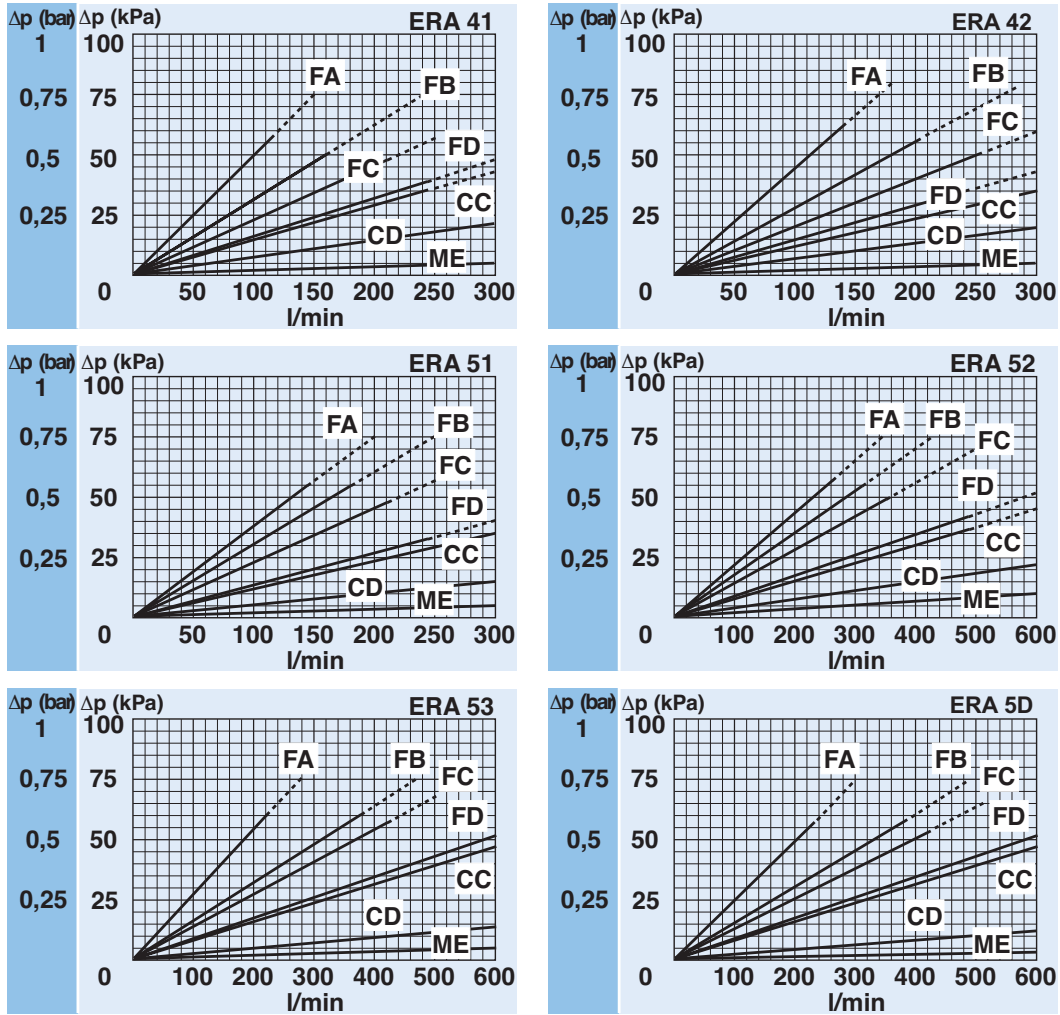

**BYPASS VALVE PRESSURE DROP**

When selecting the filter size, these curves must be taken into account if it is foreseen that any flow peak is to be absorbed by the bypass valve, it also must be of proper configuration to avoid pressure peaks. The valve pressure drop is directly proportional to fluid specific gravity.

**PRESSURE DROP CURVES ( $\Delta p$ )**

The "Assembly Pressure Drop ( $\Delta p$ )" is obtained by adding the pressure drop values of the Filter Housing and of the Clean Filter Element corresponding to the considered Flow Rate and it must be lower than 50 kPa (0,5 bar).

**BYPASS VALVE PRESSURE DROP**

When selecting the filter size, these curves must be taken into account if it is foreseen that any flow peak is to be absorbed by the bypass valve, it also must be of proper configuration to avoid pressure peaks. The valve pressure drop is directly proportional to fluid specific gravity.
